"Did you see the notice I gave you." said the editor to the grocer.

"Yes; and I don't want another. The man who says I've got plenty of said; that the milk I sell is of the first water, that there are no flies on my sugar, and that my butter is the strongest in the market, may mean well, but he is not the man I want to flatter me a second time."

Must Have the Booty.

Say, pard, they ain't none o' these fellers here got anything," said train-robier No. 1. "Yes they have, too," said No. 2. "That ar' dade's got gold fillin in his teeth. Got yer forceps?" "Naw." "Then gimme yer corkscrew. We gotter get them teeth."

'August Flower"

Perhaps you do not believe these statements concerning Green's August Flower. Well, we can't make you. We can't force conviction into your head or med-

icine into your throat. We don't want to. The money

is yours, and the misery is yours; and until you are willing to believe, and spend the one for the relief of the other, they will stay so. John H. Foster, 1122 Brown Street, Philadelphia, says: "My wife is a little Scotch woman, thirty years of age and of a naturally delicate disposition. For five or six years past she has been suffering

from Dyspepsia. She became so bad at last that she could not sit Every Meal. down to a meal but she had to vomit it

as soon as she had eaten it. Two bottles of your August Flower have cured her, after many doctors failed, She can now eat anything, and enjoy it; and as for Dyspepsia, she does not know that she ever had it."

GOLD MEDAL, PARIS, 1878.

Starch, Arrowrost or Sugar and is therefore far more eco-nomical, costing less than our centa cup. It is delicious, nour ishing, strengthening, Kashi, Diokstrip, and admirably adapted for invalid-ne well as for persons in health.

This invention provides an improved dam specially designed for streams and ponds containing game fish, permitting the free discharge of the ordinary and the extraordinary atream and storm flow without allowing the fish to escape. Combined with the ordinary weir is an auxiliary weir of novel construction with acreens on the up stream side of the dam alongside the ordinary weir, and adapted to discharge into it, the auxiliary weir forming a sufficient outlet for any surplus ing a sufficient outlet for any surplus water, while the fish are retained.

Professor Tolomer, an Italian chemist, concludes that the ozone produced by electric discharges in a thunderstorm coagulates milk by oxidizing it, and generates lactic acid. Mr. Treadwell, of the Wesleyan University, in discussing this states that the action is not a mere oxidation, but is in part produced by the growth of bacteria, which is very rapid in hot, sultry weather.

Business for the Boys.
The publishers of the CHICAGO SATUR-DAY PRESS, the People's great National Weekly, want an active, energetic boy in every town and village to sell the SATURDAY PRESS on the streets, and to act as local agent. Boys are making from \$1.00 to \$10.00 a week selling this great weekly. Here is a chance for the boys of America who want to make money. To our boys, 2 cents per copy. Don't miss the chance, but address,

SATURDAY PRESS Co., 417 Dearborn St., Chicago, Ill.

There was recently exhibited in Dublin a new burner for light-house use, possessing twice the illuminating pow-er of the largest burners now employed. It is calculated that this new burner, in connection with a specially devised system of len-es, will transmit a light equal to about eight millions of candles, which far exceeds the most powerful light at present used.

A PLEASING SENSE Of health and strength renewed and of ease and comfort follows the use of Syrup of Figs, as it acts in harmony with nature to effectually cleanse the system when costive or bilious. For sale in 50c and \$1.00 bottles by all leading days of the control of the con ing druggists.

In recent Russian trials to test the adaptability of snow breastworks against an enemy's lire, it was found that a thickness of six feet was a perfect protection against bullets fred at 300 paces. Packing the snow and pour-ing water over it to make a crust of ice, was found to keep bullets out when the thickness was only three feet

In France successful experiments have been made with sulphate of iron and with sulphate of copper, lime and water, as a spray in preventing potato

There's a patent medicine which is not a patent medicine paradoxical as that may you-tired, run-down, exhausted, nerve - wasted men and women; for you sufferers from diseases of skin or scalp, liver or lungs—it's chance is with every one, it's season always, larger it aims to purify the larger it aims to be somewhat soft in the fall and early winter, and does not make as good bread as when older and dryer. This defect may be obviated by drying the flour before baking, by placing it in a pan on the back of the store or in the fall and cold process) as a part of their ration. I notice an inquiry in the Stockman of March 5, from M. S. Z., of Beallsville, Pa., who wants to know it oil meal to be somewhat soft in the fall and early winter, and does not make as good bread as when older and dryer. This defect may be obviated by drying the flour before baking, by placing it in a pan on the back of the store or in the fall and color of their ration. ed, nerve - wasted men and

depend.
The medicine is Dr. Pierce's Golden Medical Discovery.

The makers of it have enough confidence in it to sell it on trial,

That is—you can get it from your druggist, and if it doesn't do what it's claimed to do, you can get your money back,

every cent of it.

That's what its makers call taking the risk of their words.

Tiny, little, sugar - coated granules, are what Dr. Pierce's Pleasant Pellets are. The best Liver Pills ever invented; active, yet mild in operation; cure sick and bilious head-One a done.

THE FARM AND HOME.

PROFITS OF POULTRY TO THE AVERAGE FARMER.

-How to Destroy the Pestiferous -Oil Meal For Dairy Cows

There is no source of profit available to the farmer which is capable of giving so large returns for the money invested as poultry. For example, dozen eggs can be produced at less cost than a pound of pork. It is a well-known fact that the farmer receives thirty cents per dozen for absolutely fresh laid eggs as often as the choicest bit of pork reaches fifteen cents per pound. While the price for a dozen of eggs seldom falls below ten cents, yet the price of pork often declines to five cents per pound. One dozen eggs also cost the farmer less to produce than a pound of butter. A house room made comfortable and fully equipped for one dozen hens costs no more than a shelter for a single horse or cow. By com-paring the cost of feeding and care, it is easy to decide which is the most

At the present time there is more profit in eggs than in raising poultry for market, and yet a pound of poultry flesh can be raised as cheaply as the same amount of any other kind of meat, while it averages double the price of beef or pork to the producer. Crops that drain our land of its valuable properties sometimes fail to give satisfactory returns. Now a flock of wellmanaged poultry, besides giving a direct profit, adequate to place the industry connected with them above others of its class, furnishes a fertilizer which is almost invaluable in restoring our lands to their original fertility.

Fowls are the best economizers on the farm, since they pick up every stray crumb and many kernels of scat-tered grain, that unavoidably fall to the ground and would otherwise be lost. They devour myriads of insect pests, and, while thus protecting our crops from destruction, they utilize the

The products of the poultry yard are among the luxuries which are within the farmer's reach, not, however, without some effort and expense. Whatever is really worth having costs an effort to secure. Too much has often een expected from hens, considering the care given to them. Many a poor biddy has been compelled to face the cold winds of Winter nights, costing on fences or in the tree tops. while others have only the shelter of an open shed, and are obliged to subist most of the year on such scattering bits of food as they can find for themselves. Many a man, because he is obliged to feed his hens through the winter only enough to prevent starva-tion, complains that the fowls are unprofitable, simply because they do not lay eggs when prices are high. Now, if these same hens had been properly housed, and given a little extra care and feed, they would become a paying nvestment instead of a useless expense. Much of the food which was consumed in keeping them warm could have been utilized for egg production.

So delicate and nourishing an article costs. It is just as easy to have hens laying at any season of the year as to favorable circumstances they will lay It is reasonable to suppose that all who keep hens want them to lay well. How to get the most eggs with the least trouble and expense is the question pressing for answer.

There seems to be a good deal of misapprehension as to the effect of feeding oil meal to dairy cows, says the well known writer on economic farm subjects, A. L. Crosby, in National Stockman. Some think it will produce abortion, or will ruin the butinjury of the cows or their product.

Ammonia is a most useful household Oil meal is made from flaxseed which is ground and the oil pressed out, leaving as residue a hard cake; this is reground and is then the oil meal or linseed meal of commerce. In the old process oil meal there is still from 6 to 8 per cent of oil, but this quantity is not large enough to injure cows when they are fed very liberally with it. In fact it is this oil that makes the old process meal so desirable as a feeding stuff in comparison with the new process meal, from which the oil is nearly all extracted. One effect of feeding oil meal is to keep the animal's bowels in good condition, and this is just what we must do in the case of cows about to calve. It is at the same time a food containing all the elements needed by the cow to grow the calf to perfection, and when delivery takes place there is sound. It's a discovery! the less danger of retention of the placenta, the pan. In the country, salted, or what they call pickled salmon is often golden discovery of medical science! It's the medicine for oil meal twice a day, and the last one of the herd calved to-day. I have had no trouble whatever with cows at calving time or after, and I can confiupon which all such diseases day to each cow. I have fed from three to five quarts a day to my cows all winter, and as said above have had no garget to contend with, so M. S. Z. must look for some other cause for his two cases of garget.

Pruning Dormant Growth.

All pruning done before the buds start into growth stimulates those that remain so that they grow all the more vigorously. Pruning trees when in leaf is, on the contrary, a check to the whole plant, and does not stimulate what is left. It is quite apt, however, with your strees to cause fruit

will fatten faster than if fed corn meal not best to feed only the bone and muscle-forming elements. A lean pig

fed on wheat bran will not grow so fast nor so large as if given a diet that would make some fat as well as growth. Weather Vanes for Farmers,

Where a bright, well-kept weather vane surmounts the barn or other con-venient outbuilding it gives an air of neatness, thrift and prosperity that really makes the farm more valuable. The weather vane never is put upo an old, dilapidated and unpainted an old, dilapidated and unpainted barn. That is another point in its favor, for the painting and repairing of buildings are jobs that most farm-ers are equal to if they would only try, and in doing this they would help develop powers that will be useful to them on other lines. The weather vane has its practical as well as sentimental side. Nearly half the talk at most breakfast-tables is about the weather, and a vane seen from the window enables the family to talk intelligently on this subject. The direc-tion of the wind may be learned otherwise, it is true; but we sincerely pity the man whose common means of learning how the wind is blowing is to sift coal ashes near the back corner of the house. The wind in such place is too variable to be depended upon and at each change is apt to sugges unedifying thoughts, if not unreporta

Growing Green Corn for Canneries The business of furnishing green corn for canning purposes is a growing one, and where land is not too dear it is profitable. Even a low rate per dozen of ears amounts to a high price for corn after it is shelled and dried. Besides, in most localities, part of the crop may be sold to city or village purchasers for home use, at a good deal better price than canners can pay, the latter acting as the balance which furnishes a market when it would otherwise be glutted. Most kinds of sweet corp, especially those with small ears, average much more than one ear to a stalk, and sometimes nearly two ears on the average of the piece.

Live Stock and Farm Notes. Every part of the farm should pro-

duce something of value. Sheep and hogs kept on a wooden floor will often have deformed hoofs. Sawdust is a good material to use for bedding during the spring and

In many cases millet makes a good crop to cut and feed out during the

The width of the fence run is an important item in considering the cost Cleanliness of the skin is one im-

portant item in maintaining health with the horses. On old farms at least sheep can be kept to an advantage in keeping weeds down in the pastures.

Salt is good to make plant food in the soil available, but too much of it will destroy all vegetation.

Care should be taken to make the

work teams comfortable at night, so that they may enjoy their nights' rest. To a considerable extent, at least middle fences on the farm should be of food as an egg is well worth all it built, so that if necessary, they can be readily moved.

By letting the calf run with the cow you may have the satisfaction of raising a good calf, even if it does not prove profitable.

Properly built, an all wire fence is more durable than any other that car be put up, and considering this, will in a majority of cases, be found the

The offspring resembles the parent more frequently than it does the other ancestors, hence it is important to have the personal qualities of the animals used for breeding of a good quality.

Hints to Housekeepers. By rubbing with a flannel dipped in whiting, the brown discolorations may be taken off cups which have been used

article. For washing windows, brushes, and performing many other services it becomes almost indispensable to the

careful housekeeper. Fresh cod is exceeding nice boiled and served with egg sauce; but you must get a piece from the thickest part of the fish, and it should weigh

three or four pounds. Ordinary soup stock should be made from the collection of bones left over from the table; for instance, the bones of roasted beef, mutton, veal and chicken should be saved in a cool place and boiled twice a week. This stock will not make clear soup, but can be used for tomato or cream soups.

Salt fish may be soaked over night, changing the water if it grows very salt. Always put it flesh side downwards in the pan, so that the salt may settle in cooked, and really seems to acquire a pleasant flavor from its unusual treat-

a moderately warm drying oven. Many cooks famous for good bread practice this secretly as one of the "tricks of the trade."

The spice poultice is a growing favorite in the sickroom. It is pleasant to use and easily made. Mix together dry, one heaping teaspounful each of ground ginger, cinnamon, cloves and flour. Moisten with hot water until of proper consistency to spread. Double and heat a piece of old cotton, spread the plaster on it and cover with cheese-cloth. When cold, moisten with bran-dy or whiskey and reheat.

what is left. It is quite apt, however, with very vigorous trees, to cause fruit buds to start, and may thus be sometimes advisable to bring young orchards more quickly into bearing.

Complete Rations Best For Everything.

Because an animal is fattening is no reason why it should not have properly proportioned rations, including material for making bone and muscolo, as well as fat. Cern meal is very largely carbonacoous; but it is found that when fed even to hogs that have attained full growth they will est enough more if fed fine wheat middlings, so that they
